Project

Promotional Product Management

Web Application is used to manage the job orders. It's a platform where Vendors can provide their products and decoration details. If a vendor wants to add any custom product then they can add it in the product source. In this application Affiliate can create product presentations to place orders for their Sales-Rep and Customer. If a customer wants any change or update into any presentation then they can comment on particular change on their presentation. Affiliates can place job orders for their customers and they will send purchase orders to customers. Application manages all shipping and billing details of affiliates as

well as customers. If a customer want to attach any special instructions to the job then they can add comments or they can attach comment file to job. Application calculates the total profit you will get from a particular job you do not have to worry about any further calculations.
